Understanding Making Inferences and Drawing Conclusions

Making inferences and drawing conclusions are closely related cognitive processes that involve interpreting information beyond its explicit content. These skills require readers to combine textual clues with their prior knowledge to understand the implicit meaning or underlying message in a passage. Inference is the act of deriving logical implications based on evidence, while drawing conclusions involves synthesizing these inferences to form a broader understanding or judgment.

Definition of Making Inferences

Making inferences refers to the ability to read between the lines and deduce information that the author does not directly state.
