Getting Started with the Richmat Remote HJH173

Initial setup of the Richmat remote model HJH173 is straightforward when following the manual's instructions. Proper installation of batteries and initial device code input are critical first steps. This section outlines how to prepare the remote for operation and basic button functions.

Installing Batteries

Before using the remote, insert two AAA batteries into the compartment located on the back. Ensure correct polarity alignment as indicated inside the battery compartment. Using fresh, high-quality alkaline batteries is recommended to ensure optimal performance.

Basic Button Functions

The remote features standard buttons such as power, volume, channel, mute, and numeric keypad. Each button is clearly labeled and performs its designated function across compatible devices. The manual includes detailed descriptions of each button for reference.

Programming and Setup Instructions

Programming the Richmat remote model HJH173 involves entering device codes or using the learning function to sync with the desired equipment. The manual provides detailed procedures for both methods, allowing users to tailor the remote to their needs.

Manual Code Entry

To program the remote manually, follow these steps:

1. Turn on the device to be controlled.
2. Press and hold the corresponding device button on the remote until the LED indicator lights up.
3. Enter the device code from the manual using the numeric keypad.
4. If the code is correct, the LED will blink twice, confirming successful programming.
5. Test the remote by pressing various buttons to verify functionality.

Learning Function Setup

If the device code is not listed, the Richmat remote HJH173 supports a learning mode to capture signals from the original remote. This process requires positioning both remotes facing each other and copying commands button by button.
