Definition and Types of Crises

A crisis is an unexpected event or situation that threatens the stability, reputation, or safety of an organization or community. Crises can be natural, such as hurricanes or earthquakes, or human-made, including cyberattacks, financial scandals, or industrial accidents. Identifying the type of crisis is crucial for tailoring an appropriate response.

Phases of Crisis Management

The crisis management process typically involves four phases: mitigation, preparedness, response, and recovery. Each phase requires specific actions to reduce risk, prepare for potential emergencies, manage ongoing incidents, and restore normal operations afterward. Mastery of these phases is often tested in exams to ensure comprehensive understanding.
