Understanding Simple Subject and Simple Predicate

A clear grasp of the simple subject and simple predicate is foundational in mastering English grammar. The simple subject refers to the main noun or pronoun that the sentence is about, while the simple predicate is the main verb or verb phrase that describes the action or state of the subject. These components form the core of every complete sentence, allowing students to identify who or what the sentence discusses and what action or condition is attributed to the subject.

Definition of Simple Subject

The simple subject is the single noun or pronoun that the sentence centers on, excluding modifiers and descriptive words. It answers the question "Who or what is the sentence about?" For example, in the sentence "The dog barks loudly," the simple subject is "dog."

Definition of Simple Predicate

The simple predicate is the verb or verb phrase that expresses the action or state of being of the simple subject. It answers the question "What is the subject doing?" or "What is happening to the subject?" In the sentence "The dog barks loudly," the simple predicate is "barks."
