Understanding Simple Subject and Simple Predicate

Grasping the concepts of simple subject and simple predicate is fundamental to sentence analysis and construction. The simple subject is the core noun or pronoun that the sentence is about. It answers the question "who?" or "what?" before the verb. The simple predicate, on the other hand, refers to the main verb or verb phrase that expresses the action or state of being related to the subject.

Definition of Simple Subject

The simple subject is the main word or group of words in the complete subject that names the person, place, thing, or idea the sentence discusses. It

excludes modifiers or descriptive words and focuses solely on the essential noun or pronoun. For example, in the sentence "The tall boy runs fast," the simple subject is "boy."

Definition of Simple Predicate

The simple predicate is the verb or verb phrase that tells what the subject does or links the subject to additional information. It does not include modifiers or objects but centers on the main action or linking verb. In the sentence "The boy runs fast," the simple predicate is "runs."
